ALCOHOL

## AUSTRALIAN-MADE SANITISING POWER FOR STAFF, PUPILS AND VISITORS...

When it comes to ticking all the boxes required in a highly effective sanitiser against viruses, bacteria and other microorganisms, AntiV hand sanitising gel has you covered. With an optimum 72% alcohol content in the form of cosmetic grade Ethanol, AntiV is a powerful Australian-made and owned germicide, equipped to kill germs and leave your hands hygienically clean.

Lightly fragranced and in a quick-drying gel format, AntiV is convenient for use anywhere, anytime - providing reliable hand sanitising protection for wherever your busy life takes you. Plus, unlike many brands which strip your hands of moisture and dry them out, AntiV has been specially formulated by experienced Australian chemists to be kind to your skin. Containing advanced-technology skin conditioners and moisturisers, AntiV can be relied on to leave skin soft and supple, while delivering optimal sanitising protection.

Made on location in the Southern Highlands of NSW, AntiV is available in a convenient 500ml pump pack - or 1 litre, 5 litre, 1000 litre or tanker load! Perfectly suited for EVERYWHERE within your campus, AntiV is a handy size to keep close for use by you, your colleagues and your pupils throughout the day.
