

e-chamber eco spacer

The world's first fully recyclable, compact spacer. ECO has been developed to store flat, saving on storage space and maximising portability.

ECO is also 100% recyclable to reduce waste and landfill, leaving minimal impact on the environment, whilst remaining strong enough to use multiple times.

Being manufactured locally by an industry-leading, Australian-owned and operated company means you can rely on the design and functionality to meet your expectations and quality standard.

BHC-ECO-1

Spacer Features

Australian made and owned
e-chamber is an Australian-owned company and eco is manufactured locally

universal MDI fitting
can be used with
all commonly
prescribed pMDIs

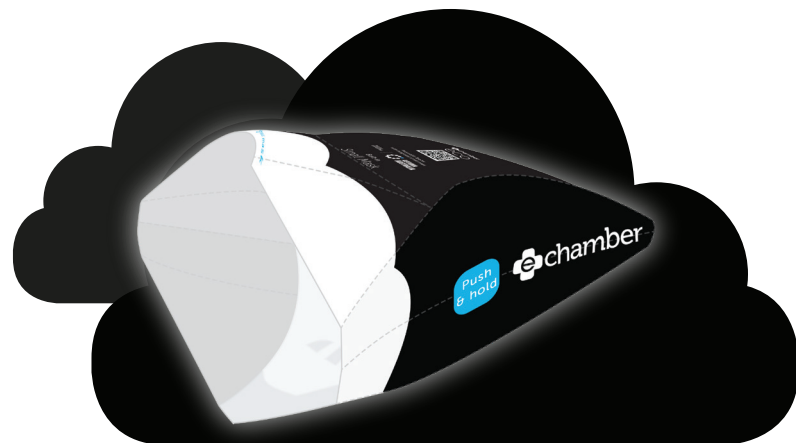

built-in infant and child mask
tear off mouthpiece to access the
face mask for infants and children

100% fully recyclable spacer
the entire spacer can be recycled
in household recycling bins

exhalation ports
allows for the expulsion of expired
air preventing turbulence and disturbance
of medication in the chamber

The e-chamber eco in-built mask

ECO features a tear-away end to provide access to an in-built mask for infants and children. Structured to not collapse easily, or be too rigid, the contoured shape of the mask helps create an optimal seal which is required to ensure maximum medication delivery.

Spacer Range

Designed to improve delivery of pressurised metered dose inhaler (puffer) medications into the lungs

Assists in creating a comfortable and effective seal to get the most of your medication
